SUMMARY

Software Engineer with 2 years of experience building ERP, HRMS, CRM, and Payroll platforms using Node.js, TypeScript, MongoDB, PostgreSQL, and Redis. Experienced in backend development, authentication systems, API design, caching, and scalable application development.

EXPERIENCE

Luvid Technologies

Jan. 2025 – Present

Junior Software Engineer

Kozhikode, Kerala, India

- Developed secure, modular RESTful APIs for a multi-tenant ERP and CRM platform using Express.js and TypeScript, reducing duplicate business logic by 40% through shared core engines.
- Implemented secure passkey (WebAuthn) passwordless authentication, attribute-based permissions (RBAC/ABAC guards), and an SSO Handoff gateway using JWT code exchange protocols to block session hijacking.
- Optimized backend process scalability for a core HRMS platform processing salaries for 150,000+ employees, implementing CPU-aware worker clustering to increase concurrent request throughput by 65%.
- Programmed statutory payroll calculations for PF, ESI, overtime, vouchers, and reimbursement heads while ensuring compliance with business rules and government regulations.
- Designed and optimized TypeScript-based backend services, MongoDB data models, aggregation pipelines, and Redis caching layers for payroll and employee management modules, reducing database load and improving response performance.
- Designed and maintained automated integration tests for authentication, payroll, and core platform services using Jest, achieving over 90% coverage across critical workflows.

Luminar Technolab

May 2024 – Dec. 2024

MERN Stack Intern

Kozhikode, Kerala, India

- Developed and deployed full-stack MERN applications with secure authentication and custom REST APIs.
- Optimized MongoDB/MySQL queries and collaborated in Agile teams to deliver production-ready features.

KEY PROJECTS

HRMS Payroll Processing & Compliance Engine | Node.js, Express.js, TypeScript, MongoDB, PostgreSQL, Redis, Socket.IO

- Played a key role in developing and scaling the core monthly salary computation pipeline for a high-volume HRMS, processing payroll compliance and disbursements for over 150,000 active employees.
- Designed high-throughput MongoDB data models, aggregation workflows, and PostgreSQL schemas to handle millions of attendance, leave, and salary records, utilizing Redis cache layers to minimize read/write latency.
- Engineered complex salary head structures, automating computations for Provident Fund (PF), Employee State Insurance (ESI), Overtime (OT) hours, vouchers, and employee reimbursement heads while ensuring compliance with statutory regulations.

Customer Relationship Management (CRM) System | Express.js, MongoDB, Mongoose, React.js, Node.js, OpenRouter, Ollama

- Designed and implemented the backend architecture for a multi-tenant CRM, automating lead pipeline management and marketing schedules.
- Implemented AI-assisted lead qualification, communication summarization, and recommendation workflows using OpenRouter and self-hosted LLM integrations.
- Designed tenant-isolated data models and API layers supporting multiple organizations within a shared CRM platform.

EDUCATION

University of Calicut

2021 – 2024

Bachelor of Science in Computer Science

Calicut, Kerala, India

SKILLS

Languages: TypeScript, JavaScript, SQL, HTML/CSS

Backend: Node.js, Express.js, REST APIs, Socket.IO, WebSockets, Mongoose

Frontend: React.js, Next.js (Basic), React Native (Basic)

Databases: MongoDB, PostgreSQL, MySQL, Redis

DevOps: Domain Setup & Integration

Security: JWT, WebAuthn, SSO, RBAC, ABAC

Testing: Jest, Integration Testing

Tools: Git, GitHub, Swagger, Postman, Firebase, Razorpay, OpenRouter, Ollama
